SUMMARY

Senior Software Engineer building large-scale distributed backend systems, AI Agents, and Kubernetes-native platforms for critical workloads. Deep expertise in Go, Python, Kafka and cloud-native infrastructure across AWS and GCP.

EXPERIENCE

RapidAI | Senior Software Engineer

Bangalore • October 2025 – Present

- Built Rapid SCU, a Kubernetes-native DICOM load-testing service with multi-pod workload distribution and status aggregation APIs, validating platform throughput at **2K–3K scans/day** across S3, Box, and local datasets.
- Developed and generalized Agent Mode automation for edge-native on-prem deployments – content bundles, Spectro profiles, Helm charts, and CI workflows – now running in production across **100 medium-to-large hospital chains**, with a roadmap to scale to **500 sites** over the next year.
- Ran an OpenTelemetry POC across Axiom, Honeycomb, and Grafana Labs, then instrumented distributed tracing across **10+ services and modules** with multi-backend export for unified cloud and on-prem debugging.
- Built an AI-powered SRE agent – integrating Prometheus MCP for live metrics/traces and a custom skill for on-prem cluster querying – cutting escalation resolution time from **2+ hours to under 30 minutes**, with **80%+ adoption** across all escalation cases.
- Tech: Go, Python, AWS, Docker, Kubernetes, OpenTelemetry, Prometheus, Grafana, Honeycomb, AI Agents, Keda, MetalLB**

Eka Care | Software Engineer 2

Bangalore • February 2023 – September 2025

- Designed a high-throughput messaging platform that **delivers 1M + notifications per day** with **99.9% uptime**.
- Built a secure webhook system for encrypted real-time delivery for **50+ clients** at **100+ queries per second**.
- Led infrastructure migrations – on-prem to cloud APIs (**200% throughput gain**) and AWS to GCP (**25% cost reduction**) – improving latency and scalability.
- Reduced AWS costs by **35%** by replacing Kinesis with **Kafka-Lambda** integration from DynamoDB streams.
- Led and mentored a team of 3 interns** to build an internal analytics platform to track customer usage across services and APIs, giving product and engineering teams real-time adoption visibility.
- Tech: Go, Python, FastAPI, Kafka, Redis, MySQL, DynamoDB, Docker, CloudFront, Lambda, Firebase, AWS Glue, Dataproc, PubSub**

IBM | Software Engineer, MQ

Bangalore • June 2021 – January 2023

- Contributed to the WebSphere MQ High Availability architecture, reducing message latency by **20%**.
- Implemented Java programs processing **1K+ messages per second** across applications and cloud platforms.
- Tech: Java, WebSphere MQ, Docker, Python, IBM Cloud**

EDUCATION

Indian Institute of Information Technology, Jabalpur

May 2021

B.Tech. in Computer Science & Engineering | CGPA: **7.7/10**

PROJECTS

ChotiParchi – Voice2Rx on WhatsApp (Team Captain) 📄

1st Place, Ekathon 2025

Voice-enabled prescription system for physicians to generate prescriptions through WhatsApp voice messages, improving the turnaround time for prescription creation, and reducing manual entry errors. Won the Eka.Care × AWS Hackathon.

SKILLS

Programming Languages: Go, Python, C++, Java, Shell

Platform & Observability: Kubernetes, Docker, CI/CD, OpenTelemetry, Prometheus, Honeycomb

Databases: SQL, MySQL, PostgreSQL, DynamoDB, Redis, Firestore

Cloud Platforms: AWS (Lambda, EC2, S3, SQS, API Gateway, CloudWatch, Kinesis, Glue), GCP (BigQuery, Cloud Functions, Dataproc, PubSub)

Soft Skills: Leadership, Collaboration, Planning, Teamwork, Time Management, Problem-Solving
